

A Clear interval change

20.1 h · horizon 0–24 h · SICU

Current · t0

Mild cardiomegaly; no edema, effusion, pneumonia, or pneumothorax.

Observed follow-up · t1

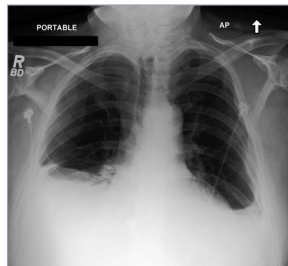

Moderate cardiomegaly with pulmonary edema; small right pleural effusion.

B Stable follow-up

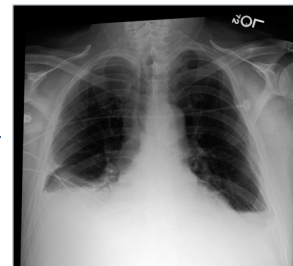

24.0 h · horizon 0–24 h · SICU

Current · t0

Bibasal pleural effusions with compressive atelectasis.

Observed follow-up · t1

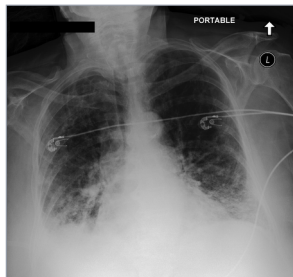

Little interval change; bibasal effusions and atelectasis persist.

C Serial follow-up

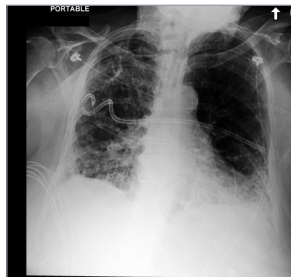

4 studies · CCU → Vascular → Vascular → Vascular

t0

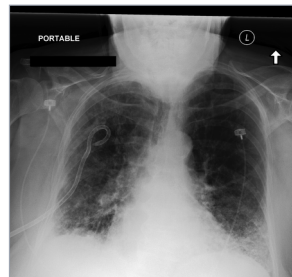

Interstitial edema; small right effusion; right pneumothorax poorly seen.

t1 · +9.2 h

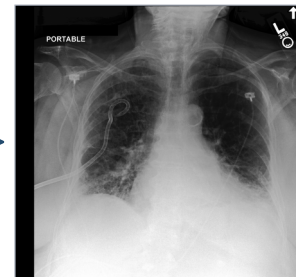

Pigtail placed; small apical pneumothorax persists; edema improves.

t2 · +32.2 h

No pneumothorax after catheter revision; chronic fibrosis remains.

t3 · +56.3 h

No pneumothorax; chronic fibrosis; likely small right effusion.
