

Clinical evidence: a first attribution check

Existing image-only classifiers | Same held-out CXR, two findings | Final 20-epoch heads

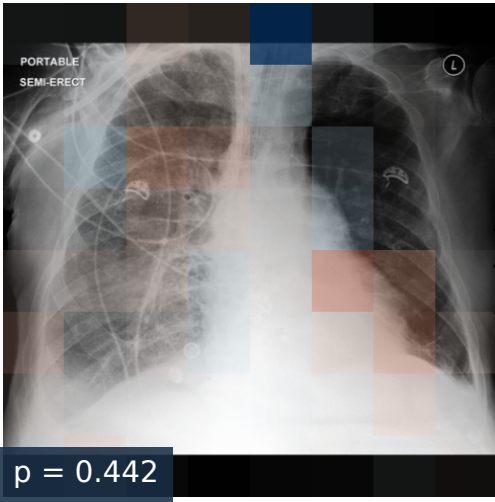

Input + image-level reference

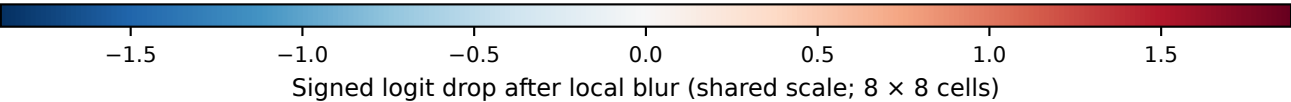

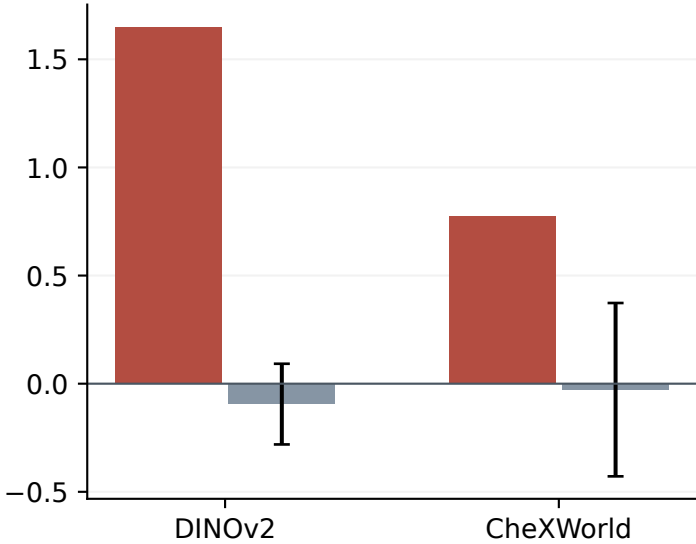

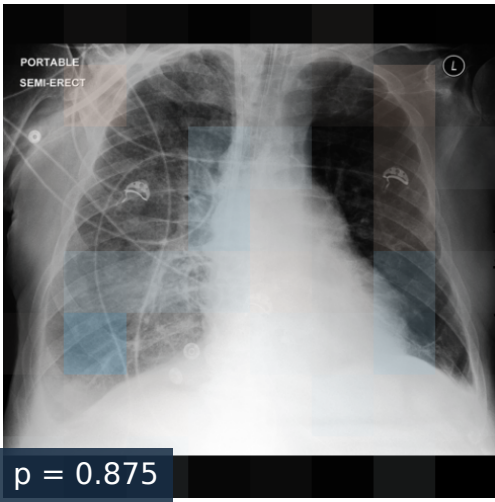

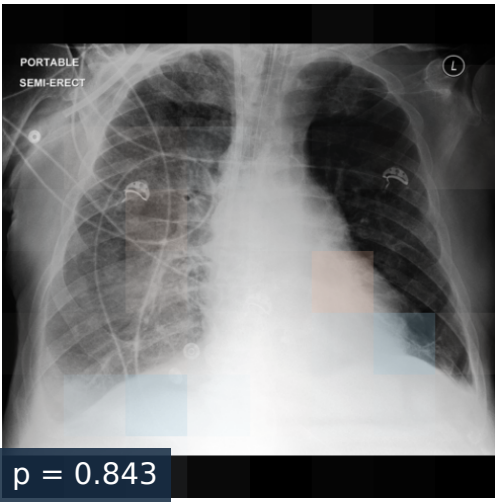

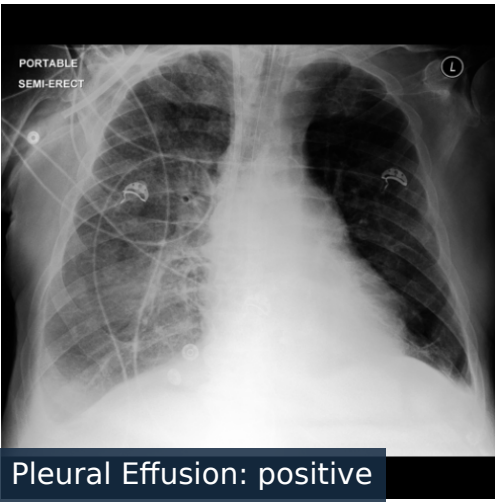

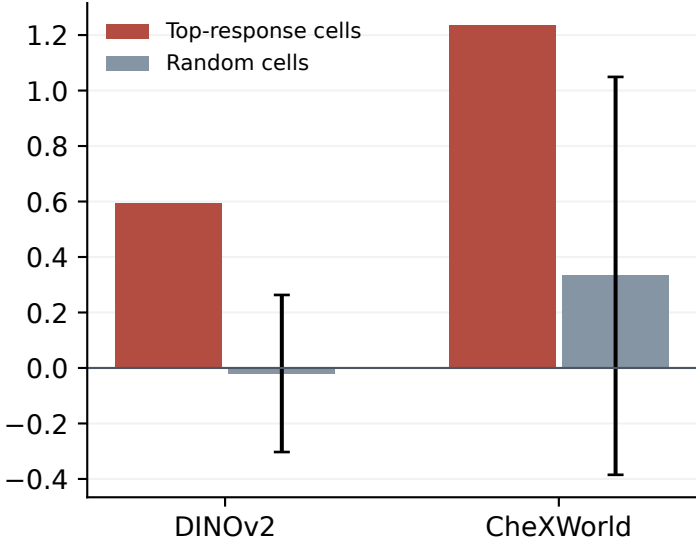

DINOv2-B/14

CheXWorld

Equal input-area blur

Baseline pilot only. No proposed-slot result or lesion-region annotation is available; these maps are attribution, not grounding or attention.

4 / 64 cells blurred per control; random mean ± SD (16 draws).
Equal canvas area; retained image / anatomical area differs.
